---

profile
Backend Developer specializing in building scalable, high-performance systems with a focus on developing RESTful APIs and optimizing databases to ensure efficient and reliable server-side operations.

Professional Experience

IT-PLUS (3/2024 => 3/2025)

Insta El-Souq

I worked as a Back-End Developer for an e-commerce application and I structured a complete project and database structure to add and modify posts to facilitate social media sites, which allows interaction from sharing, liking and commenting to obtain immediate information, in addition to a complete application in e-commerce. You can also publish your local products and sell them through the application. I also created all the project's APIs from the applications and the website as well as the dashboard.

ZahraEgypt

I worked as a Back- End Developer for an e-commerce website (ZahraEG). I focused mainly on accelerating data fetching to the website and improving the user experience, especially "adding products to the cart." This involved a lot of work that took months to develop, including offers, coupons, and quantity discounts. I also modified the entire accounting path to be completely correct, and also reduced the size of the code used and made it dynamic.

Technical Skills

- PHP
- MySQL
- Laravel
- HTML
- CSS
- Angular
- TS
- JS

Languages

- Arabic : mother tongue
- English : fluent
